

Where can I find the Window Sniffer10G myri dmesg.ps1 script?

Model:

N/A

Software:

Sniffer10G

Operating System:

Supports both the Linux and Windows Operating System.

Information:

[ISNTALLDIR]\sbin\myri_dmesg.ps1 is a PowerShell script in the Windows Sniffer10G software distribution which extracts logging information from the Windows Logs and prints them to stdout. It will verify whether the Sniffer10G license is valid, which driver is loaded, and any error statements.

This script must be run as administrator and the execution of the script requires the following setting:

Set-executionpolicy remotesigned

It is imperative that this script is executed from within the \sbin directory, otherwise important diagnostic information will not be collected.

If you cannot use PowerShell, inspect the **Event Viewer -> Window Logs** for error messages related to the Sniffer10G software.

If an issue is encountered with installation, usage, or performance, please send the output of **myri_dmesg.ps1** to CSPI Technical Support (support@cspi.com). The output of this script may contain vital information to speed the resolution of the issue.
