

Protect Your Critical Data, Protect Your Business

Today, disaster can come in many forms: fire, flood, natural disaster, hacking, human errors, and more. No matter what causes the disaster, the results can be devastating to your business – especially when it comes to your data.

For example, a catastrophic loss of business-critical data can have a long lasting, even permanent, impact on your organization’s ability to operate. Even a temporary data disruption can have a major impact and could possibly put you out of business for days, weeks, or months – or worse. Where physical property can be fixed, data can be difficult to replace, unless your company has invested in disaster recovery and backup solutions.

Vital™ Managed Data Backup and Disaster Recovery Services can help you overcome these challenges. Our powerful services deliver the highest levels of availability to help minimize the risk of data loss and maximize data protection. Our virtualized technologies give you 24/7/365 backup and recovery of your critical data and applications, and they’re fully backed by our industry-leading SLAs.

All of this helps you make sure you’re prepared for the unexpected and can take advantage of flexible disaster recovery solutions that perfectly fit your business needs.

Benefits

- Seamless: Use your cloud repository like a local backup using your preferred backup strategy.
- Efficient: Get your backups offsite quickly and easily.
- Available: Now your data is always available.
- Flexible: You can choose to recover data “over the wire,” or you can opt to receive encrypted media – whichever you prefer.
- Secure: Rest easy by encrypting your backup at source, in flight, and at rest.

Enjoy business continuity and complete peace of mind

Whether you need a simple archival backup or a comprehensive high-performance disaster recovery solution – or anything in between – Vital™ Managed IT Services has an option that is perfect for you. With Vital™, your data is as safe as it would be in your own dedicated repository, and your business is protected.

Data Backup

Vital™ Managed Backup as a Service provides affordable remote cloud-based storage for existing server infrastructures. We can provide this service as your primary backup solution or offer it as an additional backup repository.

Our powerful service helps you recover in hours, not days. With Vital™ Managed Backup as a Service, you can fully recover your backed-up data in a virtual environment in just a few hours and support your recovery time objective (RTO). When it comes to your data, failure is simply not an option.

Disaster recovery

Disaster recovery and business continuity planning isn't a one-time event and require ongoing management. If disaster hits, and you lose business-critical information, data backup is an important first step, but it may not completely solve the problem or fix it fast enough. As a result, you need a comprehensive disaster recovery solution that fully restores your operations as quickly as possible.

Vital™ Disaster Recovery solutions work in traditional or virtual environments and provide you peace of mind knowing your business can quickly recover and your critical data is always available, even in the event of a catastrophic disruption and data loss incident.

Let us do what we do best, so you can, too

In today's data-driven world, threats to business data – from human error, hackers, or natural disasters – can have serious consequences for any business. Without an effective data backup and disaster recovery strategy, your business may never recover.

Trust CSPi Technology Solutions to manage your data backup and disaster recovery services, so you can get back to what's really important – running your business.
